## Double Wide Pages The Digital Scrapbook Teacher

© 2012 Patty Debowski - The Digital Scrapbook Teacher  
August 2012 Newsletter Tip #2

Want to scrap twice as fast? There are several options. You can create a double wide page from scratch or from a 24 x 12 template. You can also drag two 12 x 12 templates on to a new 24 x 12 file.

If starting from scratch go to File>New>Blank File. Complete your page as you normally would.

To print the page as two 12 x 12 pages: Save (File>Save) the finished page first as a PSD file. Choose the Crop tool from the Toolbar. This is the one exception where you can use the Crop tool on a scrapbook page!

On the Crop tool's Options bar enter 12 inches in the Width and Height boxes. Enter 300 pixels/inch in the Resolution box.

Starting from beyond the top left corner of the page, click, hold, and drag towards the bottom center off the page. Release the mouse and Check the green checkmark ✓ to confirm the crop.

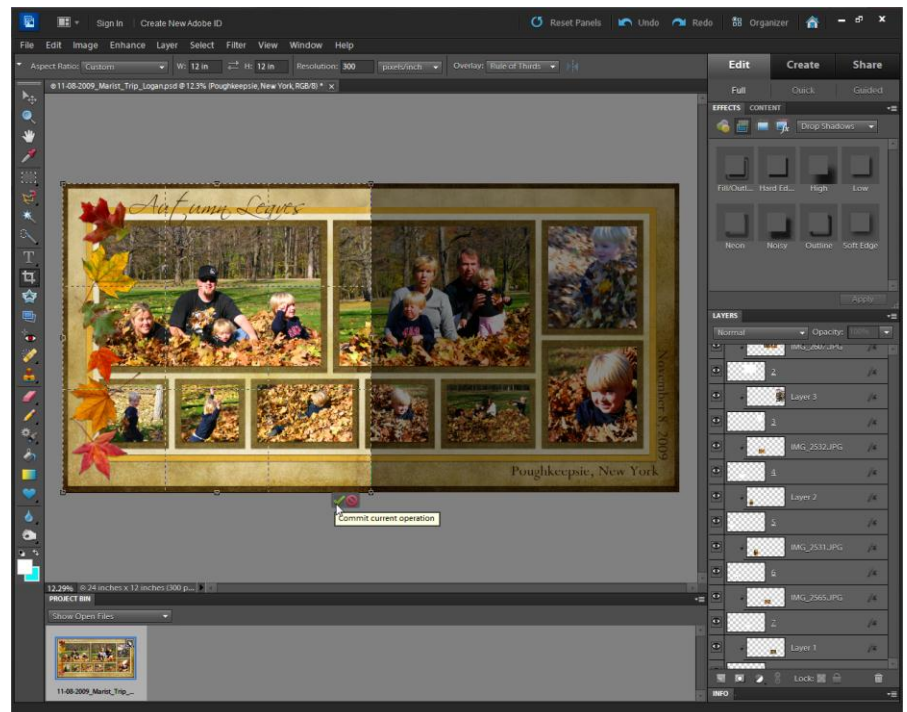

The right side of the page will disappear once you commit the crop. Many of the layers in the Layers panel will now be blank. This is all OK!

If you are printing this page on your home printer you can print it now, you do not have to save it as a JPEG file.

Choose File>Save As from the Menu bar and save the page as a JPEG file (no layers) for printing purposes. You may want to add the word "left" to the file name.

Undo by clicking on the Undo button or using the shortcut Ctrl>Z (Mac: Cmd>Z). Repeat the above steps for the other side.

Undo the crop and save the 24 x 12 inch file again as a PSD. If you would like the full page as a JPEG file choose File>Save As and save it

again.
